How the Narainsons app works, from start to finish

The full process from a customer's first login to the last EMI of their loan, and who does what at each stage.

The three parts of the system

Customer: mobile app

The customer signs in, completes KYC, applies for a loan and sends proof of EMI payments.

Staff: admin panel

Your team works in a browser to check KYC, approve loans, record money sent and verify EMI payments.

System: server

It stores all data, checks the rules, calculates EMIs, and sends OTPs, push notifications and reminders.

The whole journey at a glance

Login → Profile and KYC → KYC check → Loan application → Approval → Money sent → EMI payment → Loan closed

Money does not move through the app

The app has no payment gateway at this stage. Staff send the loan amount from your bank and enter the UTR number in the admin panel. Customers pay EMIs by UPI, QR code or bank transfer and upload a screenshot in the app. Staff then check the bank and approve the payment.

Who does what at each stage

1 **Login**	CUSTOMER Enters a mobile number or email and signs in with an OTP. Can also set a password later.	STAFF Nothing to do	SYSTEM Sends the OTP by SMS or email, valid for 10 minutes. Creates the account on first use.
2 **Profile and KYC**	CUSTOMER Completes three steps: personal details; address, job and income; then Aadhaar, PAN, bank details and consent.	STAFF Nothing to do	SYSTEM Allows the steps only in order. Stores documents securely. Marks KYC as "submitted".
3 **KYC check**	CUSTOMER Gets a notification with the result. If rejected, reads the reason and submits KYC again.	STAFF Views the Aadhaar and PAN in the admin panel, then verifies the KYC or rejects it with a reason.	SYSTEM Updates the status and sends the customer a push notification.
4 **Loan application**	CUSTOMER Sees banners and a guide video on the home screen. Chooses an amount and duration to see the EMI. Applies with a purpose and guarantors. Can cancel while the application is pending.	STAFF The new application appears in the list	SYSTEM Checks the amount, duration and number of guarantors. Blocks a second application while a loan is open.

5 **Approval**	CUSTOMER Waits for a notification	STAFF Reviews the application and approves or rejects it.	SYSTEM Blocks approval until KYC is verified. On approval, creates the EMI schedule and sends a push notification.
6 **Money sent**	CUSTOMER Gets a notification and sees the EMI dates in the app.	STAFF Sends the money from the bank, then clicks Disburse in the admin panel and enters the UTR number.	SYSTEM Sets the EMI dates, with the first EMI due one month later. EMIs can now be paid.
7 **EMI payment**	CUSTOMER Gets the UPI, QR or bank details from the app and pays. Sends the screenshot and UTR in the app.	STAFF Checks the payment in the bank and approves or rejects it. Can add a reason for rejection.	SYSTEM Refuses a claim below the EMI amount. Allows only one pending proof per EMI. Sends the result by push and counts the remaining EMIs.
8 **Reminders**	CUSTOMER Sees the reminder and pays the EMI on time.	STAFF Nothing to do	SYSTEM Checks every hour on its own. Sends one reminder a day, starting 3 days before the due date. After the due date it marks the EMI "overdue" and keeps reminding.
9 **Loan closed**	CUSTOMER Gets a notification. Can see the old loan's record and apply for a new loan.	STAFF Only needs to approve the last EMI	SYSTEM Closes the loan automatically when the last EMI is approved.

Loan status

Pending → Approved → Disbursed → Closed

Pending	Application received, waiting for staff to decide
Approved	Staff accepted it, money not sent yet
Disbursed	Money sent, EMIs are running
Closed	All EMIs are paid
Rejected	Staff declined it
Cancelled	The customer cancelled it

EMI status

Pending → Awaiting proof → Paid

Pending	Still to be paid
Awaiting proof	Customer sent proof, staff will check it
Paid	Staff approved the payment
Overdue	The due date passed without payment

If staff reject the proof, the EMI returns to pending, or to overdue if the due date has passed.

Loan rules

RULE	CURRENT SETTING
Loan amount	₹10,000 to ₹50,000, in steps of ₹5,000
Duration	3 to 24 months
Guarantors	1 per ₹10,000, minimum 1. So ₹50,000 needs 5. Each needs a different mobile number.
Interest and processing fee	Currently 0%. These can be changed in the settings.
Loans at one time	One. A new loan is allowed after all EMIs of the last one are paid.

EXAMPLE: ₹20,000 LOAN OVER 6 MONTHS

₹3,333.33	₹20,000	₹3,450.97	₹20,705.81
EMI at the current setting (0% interest)	Total repaid at 0% interest	EMI at 12% yearly interest	Total repaid at 12% interest

The last EMI can differ by a few paise so the total comes out exact. The 12% rate is only an example.

When the customer gets a notification

Each notification arrives as a push on the phone and is also saved in the app's notification list. Customers can turn push off in settings.

ABOUT	WHEN
KYC	When verified, or when rejected, with the reason
Loan	When approved, rejected, disbursed or closed
EMI payment	When proof is received, and when it is approved or rejected
EMI reminder	Once a day from 3 days before the due date, and while overdue
General	When staff send the customer a message

What's in the admin panel

- **Dashboard:** work waiting, the loan book and activity by date. Each card opens its list.
- **Notifications:** staff alerts, messages sent to customers, and sending a new message
- **Customers:** customer details and KYC review
- **Loan applications:** approve, reject and disburse
- **Guarantors, EMI payments, EMI schedule:** check proof and see what is overdue
- **Home banners, payment details, videos:** what appears in the app
- **Staff accounts, All data, My profile:** staff and records

Every list has search, date and advanced filters, 25 to 500 rows per page, and CSV or Excel download.

When a new customer signs up, a loan is applied for, KYC is submitted or EMI proof arrives, staff get a loud alert in the panel.

Two staff levels

TASK	ADMIN	SUPER ADMIN
KYC, loan and EMI decisions	Yes	Yes
Change banners	Yes	Yes
Block or delete a customer	No	Yes
Add a new admin	No	Yes
Change UPI and bank details	No	Yes

Data security

- Passwords are never stored as plain text, only as a secure hash.
- 5 wrong OTPs cancel the OTP. 5 wrong passwords lock the account for 15 minutes.
- Repeated OTP requests are limited, which controls SMS cost and misuse.
- Changing a password signs the user out of all other devices. An admin login lasts 12 hours.
- Only the customer and your staff can see that customer's Aadhaar, PAN and payment screenshots.
- The app does not store customers' contacts or gallery. This setting is turned off.

Before going live

TASK	WHY	WHO
Set interest and processing fee	Both are currently 0%	Client
Decide on a late fee	No late fee is charged today	Client
Add real UPI, QR and bank details	Customers will pay EMIs to these	Client and team
Connect the mobile app to the API	The backend APIs are ready for the app developer to connect	App developer
Final test of push, SMS and email on real phones	Testing on real devices is still to be done	Team
Live server with HTTPS	Needed to keep customer data secure in transit	Team
